

Card and Pricing Analysis - Entity Relationship Diagram (Pre-Wrangling)

This ERD is meant as a guide for creating and merging DataFrames for the project.

Magic cards are released in product-release groupings called sets. Every card is part of a set. Sets usually contain many cards, but there is a chance that a set contains no cards in this project, depending if cards are extremely niche or actively sold enough to assign them a market price per each provider.

Like sets, Pokemon cards are released in groups. They are functionally the same as Magic sets.
